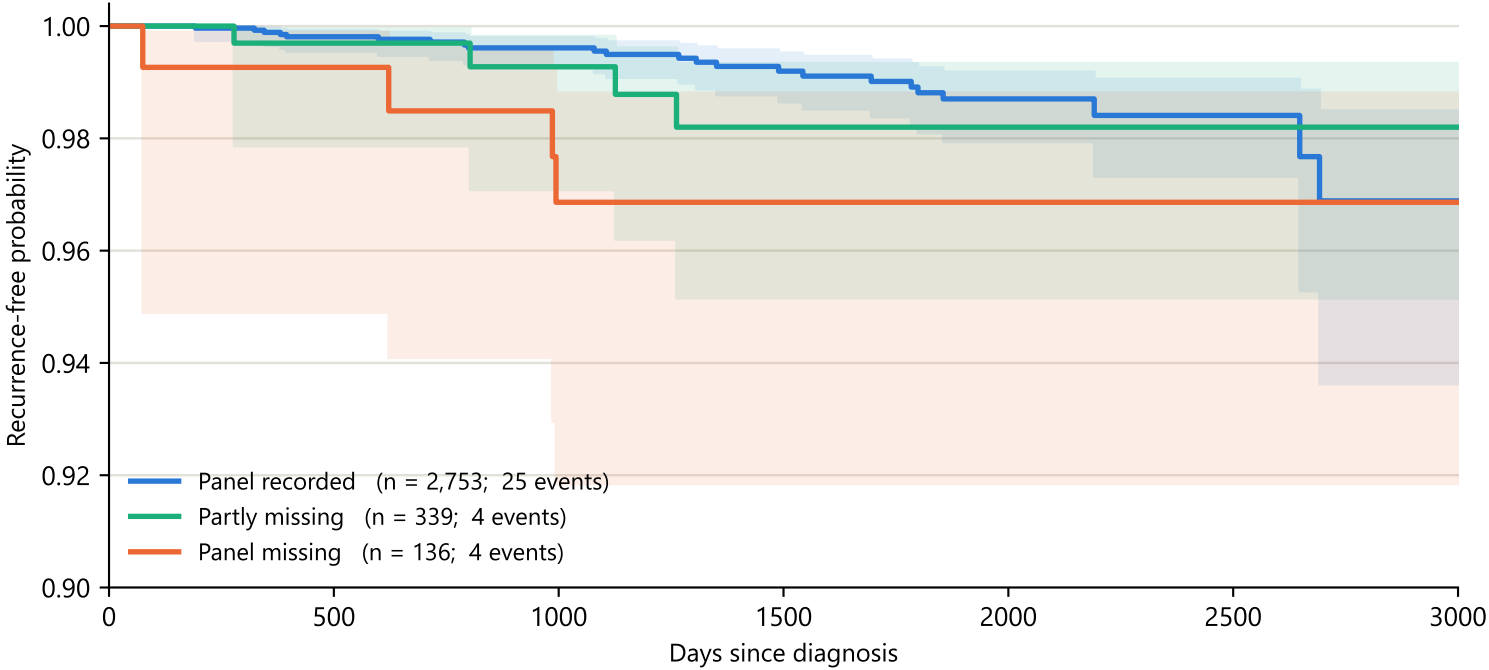
Recurrence-free survival does not differ detectably between the groups

Log-rank across the three groups p = 0.75, on 33 events in 3,228 patients. Note the truncated y-axis (0.90–1.00).



At risk							
Panel recorded	2753	2378	1765	1149	609	176	77
Partly missing	339	287	221	139	48	7	5
Panel missing	136	128	119	107	81	47	30

The log-rank test uses the full follow-up; the x-axis is cropped at 3,000 days for legibility, beyond which 2 of the 33 events occur.
