Global feature importance by model (SurvSHAP, time-integrated)
Cox
Oestrogen receptor status at CB
Neoadjuvant (Only) therapy with biological drugs
Isotype at CB_4.0
Radiotherapy on supraclavicular area
Grade at CB_3.0
Total administered dose
Adjuvant therapy using biological drugs
Side location of the lesion
Treatment in association with chemotherapy
Radiotherapy on chest wall
Isotype at CB_2.0
Her2 overexpression (with immunohystochemistry) at CB_3.0
Radiotherapy on internal mammary chain
State (if hormone therapy prescribed)
N (Regional nodes affected)_1.0

Mean |SurvSHAP(t)|, integrated over time
RSF
Oestrogen receptor status at CB
Neoadjuvant (Only) therapy with biological drugs
Age
Isotype at CB_4.0
Grade at CB_3.0
Progesterone receptor status at CB
Radiotherapy on supraclavicular area
Ki67 positive cells (%) at CB
Total administered dose
Conventional RT fraction
State (if hormone therapy prescribed)
Isotype at CB_1.0
Diagnostic panel missingness pattern_missing_3
